

- On the calendar page, the “For reference” button below opens the widgets area.
- Note that the values cannot be shown to you, as these are taken via API. You can add your values manually to see charts/information as required to fix the issues.
- Tell me where each change happens via the number of codes added for each/page.

Issue 1 :

Page - index.html ++ servicedesk.js

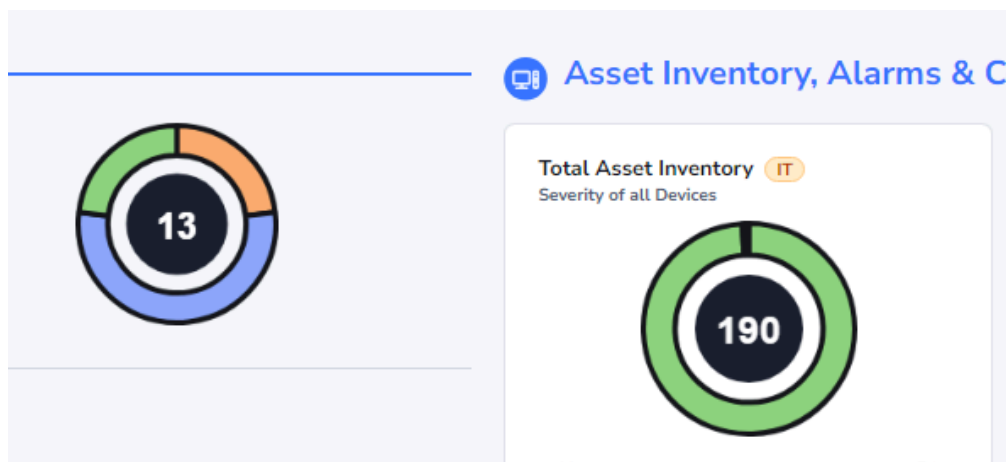

The chart, when clicking on the button to change from light/dark mode.

The chart below has gaps in between that don't change to reflect the theme change. Could you please check out how that could be fixed?

Dark Mode remains the same as it works right now.

Light Mode must be updated so that the chart gaps are white.

Issue 2:

Page - Servers.html/ network.html ++ opmanager.js

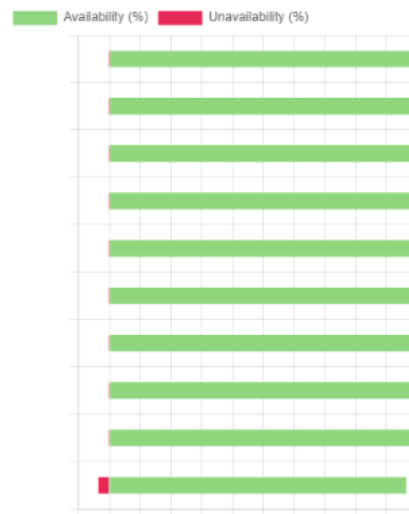

when clicking on the button to change from light/dark mode

The dark mode is fine and white, as it should be. However, when light mode is enabled, the information is not changed to black to reflect it.

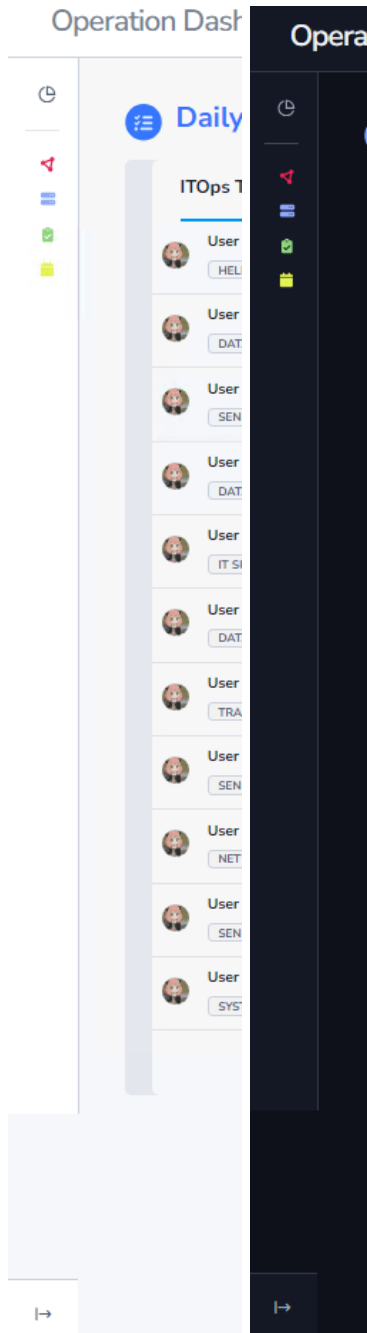

Server Availability
Last 30 days

Issue 3:

Page - dailytasks.html

The Sidebar doesn't go all the way down to align with the collapsed view button unless the page's content is full. As can be seen in the screenshot, there is a gap.

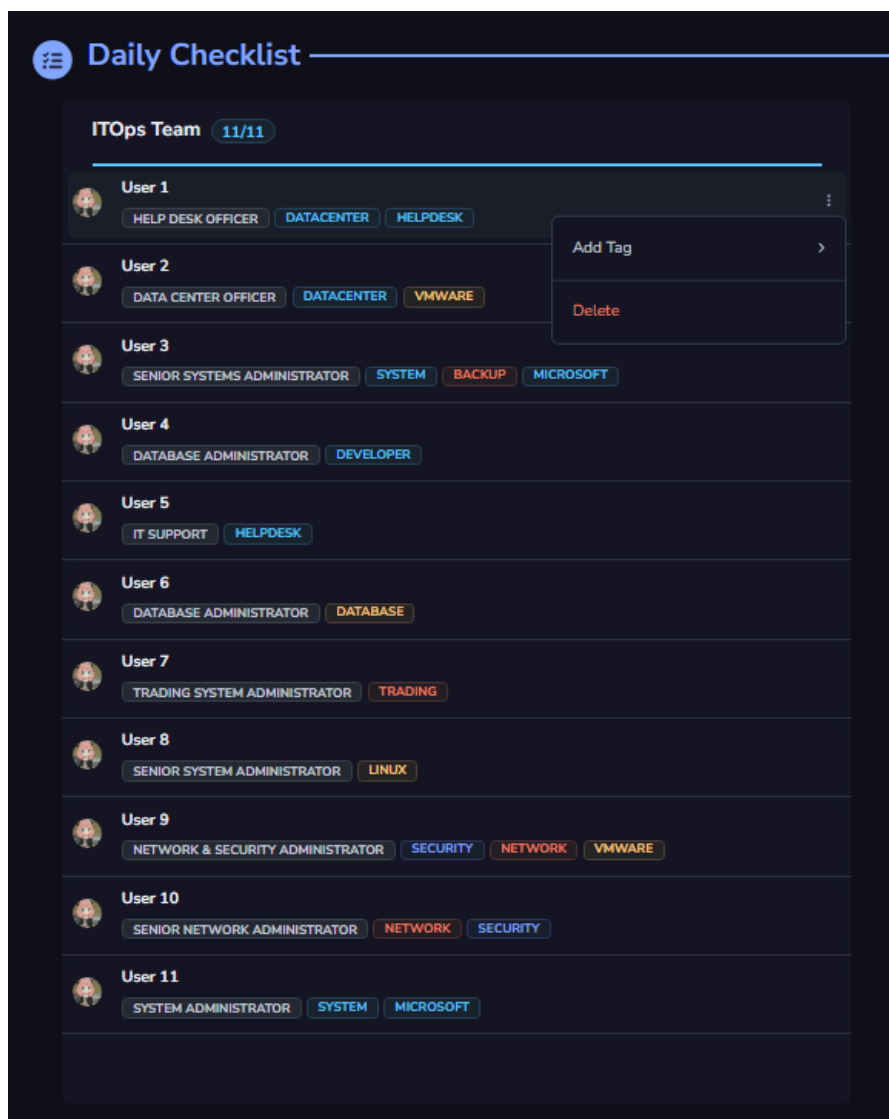

Issue 4:

Page - dailytasks.html // checklist.js

1. I want the “Add Tag” to be another button to allow users to pick their tags and to be reflected in the code whenever it is changed.

The tags should have a checkbox in the view box that would appear for the dropdown items.

2. Also, in Light mode:

There is a grey background showing that shouldn't be there.

 Daily Checklist
